Industrial Cyber Security

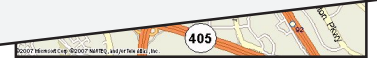

Hacker attacks, computer viruses, and espionage - these are the negative effects of continuous globalization and worldwide networks on today's process automation systems. Proper defense concepts and an integrated IT security plan can keep all critical assets of a process automation system safe and secure.

Gary McDonald is the EPC Business Development Manager for the Chemicals & Biofuels Markets at Siemens Industry, Inc., industrial automation division, reporting to their process automation headquarters in Spring House, PA. Gary is a member of the global Siemens team working to strategically develop, deploy and support chemical, biochemical and biofuels projects with EPC companies throughout the United States. Siemens is a global company focused in medical, energy and industry solutions with more than 400,000 worldwide employees. Gary earned degrees in process control and instrumentation from the University of Colorado in Boulder.
